

## [SysTools is providing two Software Tools in Bundle to Divide 2 GB PST Files after Damage](#)

*SysTools is providing two software tools in bundle to divide 2 GB PST files after damage. Now, users can recover damaged PST files with the help of Outlook Recovery software then, perform splitting process with the help of Split PST software effortlessly.*

*Online PR News* â€“ 29-April-2011 â€“ Gothenburg, Sweden, April 29, 2011 SysTools is one of the best software development solution provider companies that create lots of beneficial products to users globally. One such application is SysTools Split PST software which helps to split large sized PST files within short time.

Now, SysTools is providing two software tools in bundle using which users can divide 2 GB PST files after corruption. The two products are Outlook Recovery tool and Split PST tool. Sometimes, when PST files cross its maximum size limit (2GB) then, corruption occurs and damage PST files badly. Regarding this situation, Outlook Recovery product will help instantly to recover corrupted PST files. After performing recovery of PST file, user can split recovered PST file into smaller parts and overcome heavy PST file issues.

Evan Swans says regarding this facility, We always try to help our users by averting their frustration and problems. One such problem which creates problematic situation is bulky and corrupted PST file issue. For the solution, SysTools provides two products Outlook Recovery and Split PST software. Both products are available in affordable price so, users can easily recover and split PST files within short time.
