

[New resource about the future of web hosting, Cloud Computing Data Center](#)

An educational reference website launches for technology managers and investors

Online PR News â€“ 21-January-2010â€“ One of the most talked about new technologies is cloud computing, a technical innovation that many believe will come to dominate the web hosting business and corporate enterprise IT strategies.

Â

This new form of managing applications is still in its infancy but projections for its growth are astronomical.

Â

Already, Microsoft has committed over \$500 million to build a data center. IBM is running an ad campaign that asserts cloud computing is the future and IBM is part of it.

Â

To meet the growing need for education about this new technology, Cloud Computing Data Center is launching.

Â

Visit for a complete guide to educational material, news, and analysis. It is written for both the investor and IT professional.
