

[New Monitor Stands From Stands And Mounts Offer Customers New Display Solutions](#)

Stands and Mounts, the leading online retailer of monitor stands, announces a new line of pole mount monitor stands intended to take up less space in the home and store easily, making them ideal for apartments or dorm rooms.

Online PR News â€“ 29-May-2012 â€“ Stands and Mounts, a leading retailer in innovative display options, is proud to announce a new line of monitor stands designed with small spaces in mind. These stands offer more display options and configurations for urban spaces, giving creative homeowners a way to design and customize their in-home workspaces.

Â

Most people dont want their monitor to stay on top of a desk in another room , which is why so many people have laptops. The pole monitor stands allow them the flexibility of a laptop without buying another computer.

Once restricted to sitting on a desktop, todays computer monitors are compact and light enough to be hung on the dorm wall. But while the look of a wall mounted monitor may be stylish and contemporary, it may not be the safest option for a high dollar item. A pole mount for screens allows for the same look while providing ample support for the unit. Used with a wireless keyboard, the pole mount for monitor screens eliminates the need for a desk altogether. The user can easily sit on the couch or in a chair, even lay in bed, with the wireless keyboard and use the computer. The pole can easily be stored out of the way when company visits.

Â

The computer is much less of an office only item. These days, the computer is simply another part of a familys entertainment options, said Carol Moretto, a spokesperson for Monitors and Stands. Most people dont want their monitor to stay on top of a desk in another room , which is why so many people have laptops. The pole monitor stands allow them the flexibility of a laptop without buying another computer.

Â

Another option is to use a single pole floor stand with multiple pole mounts so several monitors can be displayed on the same pole. Up to four monitors can be staggered on the same pole, allowing the users to gather around it. This setup can be ideal for busy families looking to spend more time together.

Â

The kids can work on homework and Mom can catch up on her emails as she helps them, said Moretto. Or lets say that a husband and wife want to go on vacation. They can sit side by side on the couch, surf the internet separately, and show each other what they come up with as they find it.
