

[Ei Dynamics Introduces a Whole New Level of Automation to Microsoft Excel](#)

With Ei Dynamics 2012 release, automating Excel reports just became a whole lot easier and significantly more powerful when combined with Ei Dynamics alerting and workflow capabilities.

Online PR News â€“ 12-July-2012 â€“ Ei Dynamics today announced the 2012 release (version 5.3) of Ei Dynamics' Business Process Management solution. Ei Dynamics' offers a comprehensive set of tools for monitoring and analyzing data, sending business alerts, automating reports, and developing workflows and web business portals.

Â

A highlighted new feature in this release is the ability to automate the generation and distribution of Excel based reports as PDF, HTML or CSV documents. Companies that heavily rely on Excel for reporting will find the new Excel automation features in Ei Dynamics very appealing. With Ei Dynamics, companies can apply exception based business intelligence rules to their Excel reports. Thus, enabling them to dynamically schedule or trigger the execution and delivery of any Excel report as a PDF or other file output type without any human intervention. Combined with the ability to dynamically update cells in a workbook, recalculate pivot tables, data queries and even the ability to run macros automatically, Ei Dynamics really hits the mark.

Â
