Â

Vodeclis, a company specializing in online desktop training solutions, has burst into the Anglophone market with the launch of its English language service. This new solution has been designed to meet the desktop training needs of the 500 million English-speaking new technology users worldwide.

Â

The rapidly expanding French startup with international ambitions

Â

Building on the success of its completely unlimited training solution in France and backed by a proven business model, Vodeclis is today available entirely in English (www.vodeclis.com). This training solution has been designed and produced using the powerful tried-and-tested Vodeclis teaching method, optimized to offer an effective and flexible learning experience.

Â

The launch of Vodeclis in English is the result of a project begun almost two years ago. First we produced and published over 1,800 English language tutorials covering the key office suites in use today, including most notably Microsoft Office. Next, our technical team integrated these tutorials into our existing training solution, enabling us to offer an identical user experience and learning performance across the two supported languages (French and English), explained Xavier Sillon, Vodeclis CEO and co-founder.

Â

With the English language version of Vodeclis.com, we will be expanding our business activity in each and every one of our target markets: corporate business, educational institutions, libraries, training centers and the general public. We have already signed several distribution deals with a number of business and library partners based in the USA and Canada.

Â

Vodeclis, a leading French developer of desktop e-Learning software, was founded as a startup in September

2007. Its online desktop training solution, available in SaaS form, was commercialized in 2009 and offers an exclusive and constantly evolving catalog of more than 10,000 tutorials on over 400 software applications. The package also includes learning services, management tools and business insights. Tutorials on the 2013 version of Microsoft Office have already been produced and integrated into the training solution.

Â

Vodeclics innovative training approach has already won over 300,000 users worldwide and been deployed by over 4,000 clients from a variety of different sectors, including Thales, EDF, Bouygues Telecom, ARTE, and the University of Lausanne. Vodeclis has also developed a number of far-reaching strategic partnerships with some of the key industry players, including Orange, Microsoft and CrossKnowledge.

Â

About Vodeclis

Â

Created in 2007, Vodeclis is a developer of SaaS-based desktop training solutions. Some 300,000 users worldwide have been won over by its innovative training approach, exclusive and constantly evolving catalog which today features 10,153 tutorials (in French and English) on over 400 software applications, and extensive learning services, management tools and business insights.

Â

A leading training partner to businesses, educational institutions, libraries, training centers and individual users, the Vodeclis solution has been embraced by over 4,000 clients, including Thales, Orange, EDF, ARTE and the University of Lausanne.

Â

Since the commercialization of its training solution in 2009, Vodeclis has experienced rapid growth and today employs 17 full-time members of staff.
