

[Stellar Phoenix MSSQL Database Recovery 3.0](#)

Stellar has launched the upgraded version of MSSQL recovery software

Online PR News "24-June-2010" Gurgaon, Haryana, 24 June 2010, Stellar Information Systems Limited, the industry leader in providing quality and affordable data recovery software and services, today announced the launch of Stellar Phoenix SQL Recovery v3.0 - the latest version of MS SQL database repair tool. The upgrade launch of the SQL database repair software is loaded with a number of new and useful features, which offer enhanced recovery capability from a corrupt or damaged SM SQL Server database. The latest additions to the feature list of Stellar Phoenix SQL Recovery v3.0 are support of MS SQL 7.0 and recovery from .ndf files.

Â

SQL database when approaches towards its optimum size limit, the MDF database itself splits into two parts and starts saving data in a new NDF file. Stellar Phoenix SQL Recovery v3.0 is designed in a way that it now supports data recovery from the .ndf files, hence improving the scope of recovery result. Along with few new impressive features, the latest launch also supports recovery of MS SQL Server 7.0. Now recovery of default constraints, recovery of 'Bindings and Rules with table's column', and 'collation in MS SQL Server database 2000, 2005, and 2008' is made possible in the new launch.

Â

We have added quite a few new impressive features in the latest Stellar Phoenix SQL Recovery v3.0, such as recovery of MS SQL Server 7.0, recovery of default constraints, recovery of .ndf database, any many more, which enhance the recovery result. Now Database Administrators and Technicians can witness better restore their corrupted or damaged SQL server database with the upgraded version of Stellar Phoenix SQL Recovery said Sunil Chandna, CEO of Stellar Information Systems Limited. The SQL database repair tool is sure to save their vital time and resource and enable them to handle any SQL server database error promptly.

Â
