

[New Shapes For Skyline's Envoy Creates New Ways To Design A Trade Show Exhibit In Chicago](#)

TradeTec Skyline has added several new shapes to their Envoy Exhibit System, opening up new possibilities to design for trade show exhibits in Chicago.

Online PR News "06-November-2013" New possibilities in designing a trade show stand in Chicago with help from TradeTec Skyline. The exhibit studio has introduced new components for their Envoy Exhibit System.

Â

The Skyline Envoy Exhibit System has evolved over the last few years from a straight up and down wall platform to now include square, straight and angled designs. This ever advancing system comes with unique angular corners creating a complete custom tall structure, yet includes all the benefits of a modular system.

Â

The Envoy wall towers are revolutionary. They allow us to give exhibits a custom look but they still have the flexibility and cost-effectiveness of a modular exhibit. The modular nature of Envoy means it is easier and less expensive to rent, ship, stage and tear-down than exhibits that do not have modular components,

"Envoy is already an award-winning exhibit system. It's one of the most lightweight modular systems available anywhere and these new pieces will only increase its popularity. With the new angles, Envoy systems can be designed to provide a completely customized exhibit look and since Envoy is modular, the new components can be added to existing systems just as easily as they can be included with new orders," said Ken Buckman, CEO and Founder of TradeTec Skyline (www.ttskyline.com).

Â

In 2010, Envoy won the Buyers Choice Award at EXHIBITOR, one of the trade show industry's biggest events. Since then, the clean, modern look of Envoy has continued to shape creative exhibits for many customers who are thrilled with the flexibility of design.

Â

"The Envoy wall towers are revolutionary. They allow us to give exhibits a custom look but they still have the flexibility and cost-effectiveness of a modular exhibit. The modular nature of Envoy means it is easier and less expensive to rent, ship, stage and tear-down than exhibits that do not have modular components," noted Buckman.

Â

In addition to design shape and modular components, Envoy's graphic panels are double-sided, allowing exhibitors to broadcast their messages on both the inside and outside of the exhibit. The system is as suitable 10x20' exhibition stalls and larger island exhibits. Envoy's aluminum framing supports lights, counters, shelves, AV screens and panels without any visible mounting hardware. Seating and conferencing areas can be added to Envoy exhibits, with benches designed within the system. These designs features

save space and help to retain the sleek and modern look that makes the system so popular.

Â

The Envoy is just one unique modular solution that TradeTec uses to build creative and fully functional, yet affordable exhibits that look truly custom. To learn more visit www.ttskyline.com.
