[InStep Software to Discuss Energy Efficiency at 2014 IDEA Conference and Trade Show](#)

Company to Share Best Practices for Implementing Enterprise Energy Management for District Energy Systems

Online PR News †" 28-May-2014†" Improving operational efficiency and minimizing energy and maintenance costs are common goals among university campuses, utilities and other organizations globally. Providing insight on how to achieve and surpass energy efficiency goals, InStep Software will share best practices for implementing an enterprise energy management solution at IDEAs 105th Annual Conference & Trade Show.

Â

The well-known event takes place June 8-11 in Seattle at the Washington State Convention Center and is designed to foster discussions about community-based energy systems. As part of the Utilities Master Planning track, InStep Software will explain how to leverage current technologies to identify opportunities for energy efficiency improvements during a session at 4:30 p.m. on Tuesday, June 10.

Â

The presentation will highlight the implementation process for an enterprise energy management solution and the roles of a data historian, utility billing and predictive analytics software in a comprehensive solution. Prevalent challenges, including limited resources and various disparate data sources that are not easily integrated, will also be addressed.
 The presentation will reference specific case studies and results that include: centralized data management, process improvements, increased metering and billing accuracy, early notification of anomalies, ability to assess the health and performance of critical assets and greater involvement in conservation initiatives.

Â

InStep Software provides enterprise energy management solutions for a variety of utilities in various communities nationwide. InSteps solutions are used for transforming operational control and monitoring data into actionable information for all users throughout the enterprise. InSteps products include a real-time data aggregator (historian), trending, reporting and predictive analytics tools, utility billing, energy project tracking and a campus energy dashboard.

Â

The IDEA Annual Conference and Trade Show is IDEA's largest meeting of the year. This conference addresses a host of the most current issues in the district energy industry, including distributed generation, combined heat and power, sustainable energy, waste heat recovery and energy efficiency.
