*Revolutionary Swimming Pool Finish ecoFinish. Excellent Alternative to Pool Paint, Plaster and Vinyl Pool Liners*

Online PR News â€œ 03-November-2014â€œ Revolutionary New Swimming Pool Finish ecoFinish Excellent Alternative to Pool Paint, Plaster and Vinyl Pool Liners Now Available for Atlantic Canadian Customers

Â

FINALLY, A WORRY FREE FINISH IS DESIGNED

Â

For decades, swimming pool installers used various types of Pool Coatings such as mosaic tiles and cementitious finishes such as plaster, Marcite and Gunitite. These porous finishes require a long and complicated start up procedure and are notorious for staining, shrinking and cracking.

Vinyl liners quickly became a popular alternative to plaster finishes but vinyl Liners have their own drawbacks; they are prone to staining from sun tan lotions (which cannot be cleaned); bleaching from pool chemicals and/or poorly maintained PH levels which may cause wrinkles and creasing in a short period of time.

Â

After years of testing, research and development, ecoFinish introduces a revolutionary and innovative technology utilizing thermal spray systems and pneumatically applied aquaBrightpool finishes. aquaBrightwas developed specifically for concrete, cementitious, plaster, fiberglass, steel, aluminum and hybrid pools and spas. ecoFinish offers Pool Professionals and their clients an eco-friendly alternative that eliminates virtually all of the problems associated with other pool finishes on the market today.

Â

aquaBright by ecoFinish was designed as a permanent pool finish using a unique powder coating system. It cures instantly. It is fade, stain and crack resistant.

aquaBright provides a hard wearing swimming pool and spa finish that is designed for concrete, fiberglass, steel and hybrid pools with a variety of different surfaces. Unlike traditional pool liners, pool plasters or grouted joints which are only water resistant, aquaBright is a watertight product.

Â

No VOCs aquaBright is the environmentally friendly solution. It contains no VOCs and there is little or none of the waste associated with plaster.

Â

aquaBRIGHT offers a 10 year guarantee against fading, delamination, staining and cracking and is available in a variety of designer colours.
